

Nabed

PRODUCT GUIDE

Master Medical English. Earn your future.

A gamified, bilingual (French ↔ English) learning platform built for Algerian medical students and their teachers — flashcards, games, courses, clinical cases and more.

Web & Installable App

Français / English

Students · Teachers · Admins

Prepared for our client · Feature & functionality overview · نبض المعرفة الطبية

① What is Nabed?

The problem it solves and who it serves.

Nabed ("pulse" in Arabic) helps medical students bridge the gap from French to English medical terminology — the language of international research, journals and practice.

Most quality medical-English tools are paid, generic, and not aligned with the Algerian curriculum. Nabed is a free, curriculum-aligned, fully bilingual alternative that turns vocabulary mastery into a daily habit through game mechanics, spaced repetition and teacher-guided learning.

Who it's for

Students

Learn, practise and play their way through medical English, tracking real progress.

Teachers

Create classes, assign work, publish courses & videos, and monitor every student.

Administrators

Manage the vocabulary database, users, content and teacher approvals.

Any device

Runs in the browser and installs to phones as an app (PWA) — works offline too.

Inside this guide

- 1 What is Nabed?
- 2 Feature overview at a glance
- 3 The student experience
- 4 Gamification & motivation
- 5 For teachers
- 6 For administrators
- 7 Bilingual interface & accessibility
- 8 Installable mobile app (PWA)

② Feature overview at a glance

Everything the platform offers, grouped by area.

Smart Flashcards (SM-2)

A scientific spaced-repetition algorithm schedules each term right before you'd forget it.

Learn by Body System

Vocabulary organised into systems & modules with progress tracking and inline quizzes.

Advanced Medical English

Topic deep-dives (cardiology, pharmacology, critical care...) beyond the core curriculum.

5 Medical Games

Term Blast, Anagram, Medical Roots, Diagnostic Match and more — learn while playing.

FR ↔ EN Translator

Search a medical database with definitions, phonetics, roots and audio pronunciation.

Active Practice

Pronunciation, listening and writing exercises that build real-world skills.

Clinical Cases

Bilingual real-world scenarios with key vocabulary and comprehension questions.

Medical Videos

A library of teaching videos added by teachers and administrators.

Courses

Structured courses created by teachers, with descriptions and linked materials.

Favorites

Save words, videos and courses to a personal favorites hub for quick access.

Leaderboard & Badges

XP, levels, daily streaks, badges and national / university rankings.

Teacher Tools

Classes, assignments, reports and content publishing in real time.

Status: the items above are built and working in the application **LIVE**. A few advanced extras — real-time multiplayer Duel and the drag-and-drop Anatomy game — are planned **COMING SOON** and already visible as upcoming in the app.

The student experience

A guided daily loop: learn → practise → play → track.

Personal dashboard

On sign-in, students land on a personalised home screen showing their streak, level and XP, a daily challenge, quick stats (words learned, weekly XP, duels won), recommended modules, a practice hub and a peek at the weekly leaderboard.

Core learning tools

- + **Learn:** browse vocabulary by body system & year; each module shows progress and ends with a 10-question quiz.
- + **Advanced English:** rich topic articles (e.g. cardiovascular disorders, clinical pharmacology, critical care) with key bilingual terms.
- + **Flashcards:** a spaced-repetition (SM-2) engine surfaces due cards and adapts to each learner's memory.
- + **Translator:** instant FR↔EN search with definitions, examples, phonetics, word roots and text-to-speech audio.
- + **Practice:** pronunciation (speech recognition), listening (audio MCQ) and writing exercises.
- + **Clinical cases:** bilingual scenarios that build comprehension and contextual vocabulary.

Content & personalisation

- + **Videos & Courses:** watch teaching videos and follow teacher-created courses.
- + **Favorites:** bookmark any word, video or course and find them all in one tabbed hub.
- + **Profile:** level, XP progress, streak, words learned, earned badges and saved words.

Designed for habit. Every action earns XP, every day extends a streak, and the spaced-repetition system keeps bringing learners back at exactly the right moment — turning study into a game they want to win.

Gamification & motivation

The mechanics that keep students engaged and coming back.

XP & Levels

Every quiz, game, flashcard and exercise awards XP. XP unlocks levels from “Student” all the way to “Professor”.

Daily Streaks

Consecutive active days build a streak — a powerful nudge to return every day.

Badges

Achievements unlock automatically from real progress (first word, 7-day streak, 100 words, perfect quiz...).

Leaderboards

Compete nationally or filter by your own university to defend your cohort's honour.

The five medical games

GAME	WHAT YOU DO	REWARD
Term Blast	Pick the correct English translation against the clock	+8 XP / answer
Anagram	Reorder scrambled letters into the medical term	+10 XP / answer
Medical Roots	Identify the root, prefix or suffix of a term	+12 XP / answer
Diagnostic Match	Match terms to their English definitions	+15 XP / pair
The Duel SOON	Real-time head-to-head against another student	+50 XP / win

Level progression

Levels carry meaningful medical titles that reflect a real career path — Student → Apprentice → Intern → Resident → Practitioner → Specialist → Physician → Head of Clinic → Professor — giving long-term goals beyond a single session.

For teachers

Run classes and guide students with real-time insight.

01

Create classes

Set up a class and share an auto-generated join code; students join in one tap.

02

Assign targeted work

Create assignments by type (quiz, flashcards, pronunciation, listening, writing, cases) with due dates and XP rewards.

03

Publish content

Add medical videos and build courses that appear instantly for students.

04

Track progress

Per-class reports: students active today, average XP and average streak, plus a roster with each student's stats.

Tailored teacher profile. Teachers get a dedicated profile focused on their classes, students reached and tenure — separate from the student XP/level view. New teacher accounts are reviewed and approved by an administrator before activation, keeping the platform trusted.

At a glance

- + **Dashboard:** classes, total students, active assignments and quick actions.
- + **Classes:** rosters with XP & streak per student, copyable join codes.
- + **Assignments:** create, schedule and manage; students see them in their feed.
- + **Reports:** class-level engagement and performance summaries.

⑥

For administrators

Full control of content, people and quality.

- + **Overview:** live counts of students, words and pending teacher requests.
- + **Teacher approvals:** review and approve or reject new teacher accounts.
- + **Vocabulary management:** add, edit and organise medical terms and modules.
- + **User management:** search and filter every account by role.
- + **Content:** publish videos and advanced topics across the platform.

⑦

Bilingual & accessible

Built for French and English speakers alike.

One-tap language switch

The entire interface switches between Français and English; the learning content stays bilingual by design.

Light & dark mode

A floating control toggles theme and language from anywhere, day or night.

⑧

Installable mobile app

A real app experience without the app-store friction.

Add to home screen

Install Naped on Android, iPhone or desktop — it launches full-screen with its own icon.

Works offline

Core screens stay available without a connection, with a friendly offline page as fallback.

Future-ready. Because the app is already installable, publishing to the Apple App Store and Google Play later is a straightforward next step when desired.

How it works

From sign-up to mastery in three simple steps.

01

Create an account

Free and instant. Students choose their study year and priority systems; teachers submit a request for approval.

02

Learn with flashcards & modules

The spaced-repetition engine plans reviews while modules, the translator and practice build breadth.

03

Play, compete & climb

Earn XP through games and exercises, keep a daily streak, unlock badges and rise up the leaderboard.

Technology & reliability

Nabed is built on a modern, proven stack designed for speed, security and easy growth.

AREA	APPROACH
Application	Next.js (React) — fast, SEO-friendly, mobile-first interface.
Data & accounts	Supabase (managed PostgreSQL) with secure authentication.
Security	Row-Level Security so users only access their own data; teacher accounts are admin-approved.
Performance	Server-rendered pages and cached assets for quick loads, even on modest connections.
Delivery	Installable PWA with offline support; deployable to any modern host.

In short: Nabed combines the engagement of a game, the science of spaced repetition and the structure of a classroom — in one bilingual, installable platform purpose-built for Algerian medical students.
